

Forklift Drum Grab Type 1135w

Single Drum Grab

Gripping Head

- For lifting, stacking and transporting 210L steel tight head and open top, plastic 'L' & 'XL' ring drums. (Open top drums should always have lid fitted)
- Fully automatic operation. Drum grips the rim of the drum even over rough terrain using its unique gripping action
- To fix; Clamp the attachment to the forks of the fork lift truck using the two hand tightened clamps
- To pick up; Position the attachment so that the lower jaw catches the rim of the drum. As the forks are raised, both jaws automatically close over the rim of the drum and tighten their grip. The drums are now securely clamped and can transported to their new location. The drum grip is maintained even over rough terrain
- To release; The drum is lowered to the floor in the required position and the forklift truck is backed away. The drum grip automatically disengages
- Please ensure that the rim of the drum is not damaged and is strong enough to be lifted

No of Drums	1
SWL	750kg
Overall W x L x H	755 x 1150 x 1045mm
Fork centres	620mm
Maximum fork section	125 x 50mm
Centre of gravity	850mm
Lost load centre	Fork length + 240mm
Weight	57kg
Model/Type	1135w
